SUMMARY

Data Analyst / BI Developer with 3+ years of experience using SQL, Power BI, Python, and Azure to build ETL pipelines, dimensional models, and KPI reporting solutions across healthcare and insurance, improving reporting efficiency, data quality, and operational decision-making.

SKILLS

Languages & Analytics: SQL, Python, Pandas, DAX, Power Query (M), EDA, Statistical Analysis

BI & Reporting: Power BI, Power BI Service, Tableau, SSRS, Dashboard Development, KPI Reporting, Scheduled Refresh

Data Modeling & SQL: Semantic Models, Star Schema, Row-Level Security, CTEs, Joins, Window Functions, Query Optimization

Data Integration & Cloud: Azure Data Factory, SSIS, ETL Pipelines, Azure SQL Database, Azure Data Lake, Microsoft Fabric

Data Quality & Business Analytics: Data Cleaning, Data Validation, Data Reconciliation, Data Storytelling, Requirements Analysis, Operational Reporting, Ad Hoc Analysis

Databases & Tools: SQL Server, PostgreSQL, MySQL, Snowflake, Excel, Git, GitHub, Jira, Agile/Scrum

WORK EXPERIENCE

Data Analyst

Oct 2025 - Present

| Dell Technologies, Canada

- Clinical reporting required daily data from multiple EHR feeds, so consolidated **ADT, appointment, referral, lab and provider records** from Azure SQL into Azure Data Lake, cutting manual reconciliation by **15%**.
- Built **Power BI reporting models** for wait time, referral backlog, appointment utilization, discharge turnaround and provider productivity so hospital managers could identify service bottlenecks and plan capacity more effectively.
- Added validation checks for **duplicate MRNs, incomplete encounters, inactive provider IDs and invalid diagnosis mappings** before refreshes, reducing dashboard reporting exceptions by **5%**.
- Redesigned EHR reporting data into **patient, encounter, provider and appointment dimensions** to eliminate repeated SQL logic and help analysts create cross-functional reports **20% faster**.
- Worked with clinical informatics teams to standardize KPI definitions for emergency visits, readmissions, referral completion and appointment adherence, reducing repeated dashboard-change requests.

BI Analyst

Jun 2024 - Aug 2025

| HCLTech, India

- Underwriting reports were spread across PostgreSQL, MySQL and Azure SQL, so built a **centralized policy, claims and renewal reporting model** that cut manual report preparation by **15% across 6 business functions**.
- Created **18+ Power BI dashboards** for quote-to-bind conversion, policy retention, claims turnaround and premium trends, giving underwriting managers a consistent view and reducing reporting turnaround by **12%**.
- Automated daily policy, broker and claims ingestion with **Python, SQL and Azure Data Factory** to remove repetitive validation work, saving nearly **8 hours of reconciliation each week**.
- Optimized **CTEs, indexed joins and star-schema** for **70K+ policy transactions**, improving dashboard response time by **8%**.
- Analyzed underwriting and claims data to surface **premium leakage and renewal trends** for monthly portfolio reviews, contributing to **10% faster business decisions**.

Junior Analyst

Jan 2024 - May 2024

| HCLTech, India

- Combined policy, customer and claims data from **SQL Server, MySQL and PostgreSQL** into standardized reporting datasets, improving source-data consistency by **7%** before BI development.
- Automated **Pandas and SQL** checks for duplicate policies, missing customer fields and premium mismatches, reducing reporting defects by **~10%** before dashboard release.
- Built reusable **SQL datasets and Power Query transformations** for recurring underwriting and claims scorecards, contributing to a **2.5% shorter report-delivery cycle**.
- Created reusable **DAX measures** for underwriting and claims KPIs so recurring scorecards used consistent definitions across reports and refreshes.

Intern - Analyst

Jul 2023 - Dec 2023

| TechAnek Technologies, India

- Month-end reporting required repeated manual corrections, so rebuilt the Power BI model with **20+ DAX measures** on SQL views, reducing reporting rework by **~30%**.
- Developed **5+ Tableau workbooks** on CTE/join-based SQL views and added Pandas validation with Git/Jira workflows, improving consistency of recurring month-end reports.

PROJECTS

- | **DataNorth** | [Website](#) | [Source Code](#) Apache ECharts, Data Modeling, KPI Reporting
- Built DataNorth with NORDIK Institute as a Northern Ontario public-data platform covering **53 indicators, 10 categories and 6 communities** with interactive dashboards and Statistics Canada data.
- | **Canadian Superstore Analytics Hub** | [Website](#) | [Source Code](#) Python, Pandas, FastAPI, RFM
- Built a sales analytics dashboard on **~10K orders** with **8 cross-filters and 10 analytical endpoints** covering KPI trends, RFM, market-basket and profitability analysis.
- | **Sault Ste. Marie Climate Trends Dashboard** | [Dashboard](#) | [Source Code](#) Tableau, Time-Series Analysis, Forecasting
- Built a Tableau dashboard on **33 years (1990-2023)** of CanDCS-M6 climate data with drilldowns, parameter filters and forecasting views for YoY/MoM analysis.

EDUCATION

M.Sc. Computer Science, Algoma University - Canada GPA: 3.7/4.0	2025 - 2026
B.E. Computer Engineering, Gujarat Technological University GPA: 3.9/4.0	2020 - 2024
