

Summary

- An articulated **BI Developer / Data Analyst with 3 years of experience** designing enterprise reporting solutions across Healthcare and Insurance clients.
- Experienced in building end-to-end analytics workflows using SQL, Power BI, Python, Azure Data Factory, Azure SQL Database, Microsoft Fabric, and Azure Data Lake, transforming operational data into scalable reporting models, KPI dashboards, and actionable business insights.
- Proven ability to optimize SQL performance, automate ETL processes, develop semantic data models, and collaborate with cross-functional stakeholders to deliver reliable self-service BI solutions.

Skillset

Programming Languages: SQL, Python, DAX, Power Query (M)
Business Intelligence & Visualization: Power BI, Power BI Service, Tableau, Metabase, SSRS, Dashboard Development, KPI Reporting, Interactive Dashboards, Data Storytelling
Power BI: Data Modeling, Semantic Models, Star Schema, Row-Level Security (RLS), DAX, Power Query, Scheduled Refresh
Data Analytics: Data Cleaning & Validation, EDA, Statistical Analysis, A/B Testing, Hypothesis Testing, Business Insights
ETL & Data Integration: Azure Data Factory, SSIS, Data Transformation, Data Extraction, Data Integration
Databases: Microsoft SQL Server, PostgreSQL, MySQL, Azure SQL Database, Snowflake, Microsoft Fabric, PySpark
SQL Development: Complex SQL Queries, CTEs, Joins, Window Functions, Query Optimization, Views
Azure Cloud: Azure Data Factory, Azure SQL Database, Microsoft Fabric, Azure Storage
Tools & Technologies: Microsoft Excel, Google Sheets, Git, GitHub, Jira, Agile, Scrum, Slack, Google Collab

Professional Experience

- Data Analyst, Dell Technologies** Oct 2025 – Present | Remote, Canada
- Consolidated daily ADT events, outpatient appointments, referrals, laboratory orders, and provider activity from Azure SQL Database into curated datasets within Azure Data Lake, reducing manual reconciliation across clinical operations by 15%.
 - Constructed Power BI reporting models for patient wait time, referral backlog, appointment utilization, discharge turnaround, and provider productivity, enabling hospital managers to identify service bottlenecks and improve operational planning.
 - Streamlined Azure pipelines by introducing validation rules for duplicate MRNs, incomplete encounter records, inactive provider IDs, and invalid diagnosis mappings, decreasing reporting exceptions by 5% before clinical dashboards were refreshed.
 - Restructured EHR reporting datasets into a dimensional model by separating patient, encounter, provider, and appointment dimensions, allowing analysts to produce cross-functional operational reports 20% faster without rebuilding SQL logic.
 - Partnered with clinical informatics teams to convert changing reporting requirements into reusable KPI definitions for emergency visits, readmission rates, referral completion, and appointment adherence, reducing dashboard enhancement requests..
- BI Analyst, HCLTech** Jun 2024 – Aug 2025 | India
- Built a centralized underwriting reporting model by integrating policy, claims, and renewal data from PostgreSQL, MySQL, and Azure SQL, reducing manual report preparation by 15% across 6 business functions.
 - Delivered 18+ Power BI dashboards tracking quote-to-bind conversion, policy retention, claims turnaround, and premium trends, enabling underwriting managers to reduce reporting turnaround by 12%.
 - Automated daily insurance data ingestion using Python, SQL, and Azure Data Factory, validating policy, broker, and claims records before reporting, eliminating nearly 8 hours/week of manual reconciliation.
 - Optimized insurance reporting queries through CTEs, indexed joins, and star-schema redesign, improving dashboard response times by 8% while supporting over 70K policy transactions.
 - Analyzed underwriting and claims datasets using statistical techniques to identify premium leakage and renewal trends, contributing to 10% faster business decisions during monthly portfolio reviews.
- Junior Analyst, HCLTech** Jan 2024 – May 2024 | India
- Prepared reporting datasets by consolidating policy, customer, and claims information from SQL Server, MySQL, and PostgreSQL, improving source-data consistency by 7% before BI development.
 - Performed automated data-quality checks using Python (Pandas) and SQL to identify duplicate policies, missing customer attributes, and premium mismatches, reducing reporting defects by ~10%.
 - Assisted in developing Power BI operational scorecards by creating SQL datasets, Power Query transformations, and DAX measures for underwriting and claims KPIs, shortening report delivery by 2.5%.
- Intern - Analyst, TechAnek Technologies** Jul 2023 – Dec 2023 | India
- Reduced month-end reporting rework by ~30% by rebuilding the Power BI model with 20+ DAX measures and 5+ Tableau workbooks on SQL views (CTEs, joins), hardened with Pandas validation, Git and Jira.

Projects

DataNorth

- Built DataNorth with NORDIK Institute – a Northern Ontario public data platform exposing 13 indicators across 10 categories and 6 communities, with interactive ECharts dashboards, URL-synced geography/year filters, and methodology-tagged CSV/Excel exports backed by real Statistics Canada datasets.
- **Tech Stack:** Apache ECharts, BI Dashboards, Data Modeling, KPI Reporting | [Source Code](#)

Canadian Superstore Analytics Hub

- Shipped a sales analytics dashboard on ~10K orders with 8 cross-filter dimensions and 10 Pandas/FastAPI analytical endpoints – KPI summary, monthly trends, RFM customer segmentation, market-basket affinity, and discount-bin profitability.
- **Tech Stack:** Python, Pandas, FastAPI, RFM, Market Basket Analysis | [Source Code](#)

Sault Ste. Marie Climate Trends Dashboard

- Built a Tableau dashboard on 33 years (1990–2023) of CanDCS-M6 climate data from climatedata.ca with date-hierarchy drilldowns, parameter-driven filters, and forecasting views for fast YoY/MoM trend analysis across multiple SSM locations.
- **Tech Stack:** Tableau, Time-Series Analysis, Forecasting | [Source Code](#)

Education

M.Sc. Computer Science , <i>Algoma University</i> GPA: 3.7/4.0	Sep 2025 – Aug 2026 Canada
B.E. Computer Engineering , <i>Gujarat Technological University</i> GPA: 3.9/4.0	Oct 2020 – Jul 2024 India
